DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Greenberg et al. (Greenberg), U.S. Patent 6,471,873 B1.

Greenberg discloses the claimed method of removing phosphorous from water comprises immersing electrodes into a tank filled with water, applying a DC voltage between the electrodes to generate hydroxide ions through a cation migration in the water and/or an electrolysis and precipitating phosphate ions in the water (see col. 17, lines 30-60). The reference further discloses the claimed shapes of the electrodes and the flow through cell (see figures 1-9 and claims 1-

89). The cell would include some granular solids, such as claimed since it is for the treatment of groundwater (see Abstract).

Therefore, since the Greenberg patent discloses each and every limitation, the claims are anticipated.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Greenberg applied as above.

Art Unit: 1753

Greenberg, while disclosing the use of a filter, does not disclose the claimed method of recovering the phosphorus compound by backwash. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Greenberg patent, because backwash is a conventional means to remove material that is deposited onto a filter.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is (703) 308-2528. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.
